

Optimized Package Solution for Maximum Efficiency

The use of optimally compatible products leads to higher productivity and lower costs

Optimized Package Solution for Maximum Efficiency

The use of optimally compatible products leads to higher productivity and lower costs

With the development of our optimized package solution consisting of ECOCURE™ BLUE binder, MIRATEC™ TS coating and the additive VEINO™ ULTRA 2000, we offer you the opportunity to ensure your profitability and to secure your market position. The package solution makes a significant contribution to lowering costs per core and increasing productivity. The cost-effectiveness of the package solution also continues in subsequent processes, as reworking costs can be significantly reduced with the optimized package solution.

Increased profitability due to ...

Increased productivity

- Cycle time reduction (shorter gassing times, shorter coating handling times)
- High machine availability due to the low adhesion tendency of the binder and the additive
- Reduced rework/scrap

Reduction in input materials

- Binder reduction and reduced amine consumption due to very good reactivity (up to 20% possible)
- Additive reduction
- Coating reduction due to more effective solid mixture (up to 30%)
- Reduced release agents
- Reduced disposal and landfill costs

Sustainability

- Reduction in emissions, especially of BTX, NOx and VOCs
- Reduction in odor emission in the core shop and outside the foundry
- Makes compliance with occupational exposure limits possible

Holistic view of the process chain for sustainable cost reduction
